

AUTOHOT UNDER SINK CROSSOVER (USC) SYSTEM

AutoHot introduces the NEW Under Sink Crossover (USC) System. The AutoHot-USC is an on-demand recirculation pump for plumbing systems that do not have a dedicated return line. With a fast and easy installation and unmatched efficiency, this is the hot water solution you've been waiting for.

HOW IT WORKS

- 1** Pump turns on by activating either a wireless button or motion sensor.
- 2** Pump sends hot water through the plumbing line. The Under Sink Crossover allows the cold water from the hot line into the cold line.
- 3** Temp sensor sends a wireless signal to turn the pump off when it sees a 6 degree rise in temperature, ensuring no hot water crosses into the cold line while getting hot water to the end within seconds

BENEFITS:

- Fast hot water:** Saves up to 10,000 gallons of water annually
- Operates on-demand:** Minimizes run time to 15 min or less per day
- Easy Installation:** No outlet needed under the sink
- Smart system:** Keeps hot water from crossing into the cold water line

Works with any tank, tankless, or heat pump water heater

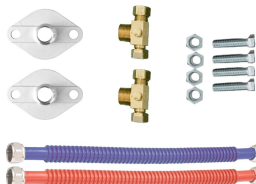

AUTOHOT-USC SYSTEM INCLUDES

55 or 99 series pump

(2) wireless activators and wireless temperature sensor

Under Sink Crossover kit:
(2) brass tees, flex lines, check valve
