

Demand Controlled Hot Water Recirculation

**NEW PRODUCT
SPOTLIGHT**

Wireless Receiver Kit for Tankless Water Heaters with Integrated Recirculation Pumps

AutoHot® introduces the NEW Wireless Receiver Kit (WRK-100). This kit turns almost any tankless water heater that has a built-in recirculation pump into an on-demand system that can be activated from anywhere in the house, whenever it's needed. The kit comes with (2) wireless buttons but can have a total of (10) wireless activators, either push button or motion sensor.

Part# WRK-100 includes:

One receiver and (2)
wireless button
activators.

Works with most tankless heaters with
integrated recirculation pumps, including:
Navien, Rheem, Noritz, Bradford White, AO
Smith, and Rinnai

BENEFITS:

- Turns on a tankless water heater's integrated recirculation pump on-demand, only when needed.
- Saves gas and reduces tankless fire time, extending the warranty of the tankless.
- Reduces wear and tear on your plumbing system.
- Can use up to (10) wireless activators, either push buttons or motion sensors, or combination of both.
- Easy installation and has a wireless range of up to 1000 ft in open air.

HOW IT WORKS:

- 1 Push a wireless button or trip a wireless motion sensor from anywhere in the house to activate your tankless heater's internal recirculation pump, only when needed.
- 2 Once hot water reaches the end of the plumbing line, the pump turns off automatically.
- 3 The pump will only run when there is both a signal for demand AND the temperature at the end of the line is not already hot, saving money and reducing tankless runtime (improving your tankless warranty).
